Please join the Bussmann™ series team for a 4-hour training seminar that will review UL 508A Supplement SB definitions and methods for determining short-circuit current ratings (SCCRs). This course will include multiple practice examples as well as review common mistakes and misapplications in industrial control panel design.

This training session is ideal for original equipment manufacturers (OEMs), design engineers, panel builders and anyone interested in learning more about SCCR. It is also a great refresher for anyone preparing to take the UL 508A MTR Qualification Exam.

This training seminar will be led by Bussmann Field Application Engineer, Christy McElhinny.
