Technical Sessions & Tradeshow

Each year, Rexel Tech Tour hosts more than 200 problem solvers, makers and leaders who are shaping the future of industrial operations. This one-day event provides unparalleled opportunities for learning, inspiration and connections. Dive deep into training from knowledge experts on the latest technology advancements and explore the newest innovations showcased across an expansive showfloor with over 20 of Rexel's leading manufacturer partners.

Topics Covered

- **Increase** production and operational performance by modernizing your control technologies
- **Enhance** workforce skills and efficiencies with the latest industrial tools and resources
- **Leverage** data from your existing machines for faster, more accurate decision-making
- **Protect** critical assets implementing a safe, secure, and structured network strategy

Event Schedule See Reverse Side For Session Descriptions. All Sessions & Labs Are 60 Minutes.

	KEYSTONE	TELLURIDE	VAIL	Main Hall Tradeshow
9AM	What's New & Coming in Rockwell VFDs	Improving HMI Performance	FT Optix: Data Visualization Platform	
11AM	Collaborative Robot Solutions & Demo	Migration Strategies for Rockwell Systems	Enhancing Maintenance with Smart HMI Integration	Lunch Served At Noon
1PM	Latest Tools for Design & Configuration	Drive Installation Best Practices	New Technologies for Superior Panel Build	
3PM	Recent Innovations for Software & Controls	Strategies to Optimize Performance & Scale	Packaged Drives & Pumpjack Control	Happy Hour at 5PM

TECH TOUR²⁰²⁵

SMART MANUFACTURING

SESSION DESCRIPTIONS

What's New & Coming in Rockwell VFDs

9:00AM – 10:00AM

Discover Rockwell's latest VFD products featuring enhanced diagnostics and control capabilities. Learn about new platforms and upcoming features, and see how these innovations can boost efficiency, improve reliability, and optimize your control systems.

Collaborative Robot Solutions & Demo

11:00AM – 12:00PM

Experience a live demonstration of the Doosan A0509 collaborative robot. See how intuitive point-to-point teaching and advanced torque sensing allow for safe, flexible automation—eliminating the need for traditional guarding or light curtains in your facility.

Latest Tools for Design & Configuration

1:00PM – 2:00PM

Increase productivity by programming and configuring your control system without software installation. Explore new tools like CoPilot AI, GitHub integration, and revision management, plus simulation and remote troubleshooting to streamline your workflow.

Recent Innovations for Software & Controls

3:00PM – 4:00PM

Join us to explore the latest advancements in Rockwell Automation's Software and Controls. Discover new and upcoming technologies, and gain insights on how these innovations can help you achieve faster results and maximize your automation investments.

Improving HMI Performance

9:00AM – 10:00AM

Unlock the power of Rockwell's HMI libraries to enhance information display, diagnostics, and system performance. Learn how these tools can reduce repair time, improve fault detection, and empower your workforce to resolve issues quickly and efficiently.

Migration Strategies for Rockwell Systems

11:00AM – 12:00PM

Stay ahead with Rockwell's migration strategies for controllers, HMIs, drives, and MCCs. Learn how to upgrade legacy equipment, adapt to new standards, and consolidate solutions for sustainable, long-term manufacturing success with minimal disruption.

Drive Installation Best Practices

1:00PM – 2:00PM

Protect your drives from power quality issues and extend system life with proven installation best practices. Learn how to pair drives and motors effectively, avoid harmonics problems, and ensure reliable, long-term performance for your operations.

Strategies to Optimize Performance & Scale

3:00PM – 4:00PM

Discover how to reduce downtime, maximize asset utilization, and support capital investments with smart technologies. Learn practical ways to upskill your workforce, reduce risk, and create a roadmap to scale and future-proof your manufacturing operations.

FT Optix: Data Visualization Platform

9:00AM – 10:00AM

Explore FactoryTalk Optix, Rockwell's advanced platform for HMI and data visualization. Generate real-time and historical data, dashboards, and reports, with features like C# scripting and REST API integration for powerful analytics and decision-making.

Enhancing Maintenance with Smart HMI Integration

11:00AM – 12:00PM

Discover how to seamlessly connect industrial data from smart HMIs to your Computerized Maintenance Management System (CMMS). This powerful integration enables real-time insights, streamlines maintenance workflows, and supports predictive maintenance strategies for optimal uptime.

New Technologies for Superior Panel Build

1:00PM – 2:00PM

See Rockwell's latest industrial control products designed to speed up panel builds and save space. Highlights include MI00 starters for zero-stack motor control and new Ethernet solutions for push buttons, pilot devices, and motor starters.

Packaged Drives & Pumpjack Control

3:00PM – 4:00PM

Explore Sensia's packaged drive and pump jack controls, developed for the oil and gas industry. This session covers current product options and features, helping you optimize performance and reliability in demanding field applications.
