Innovations In This Edition

- CompactLogix® 5390 Controller
- LogixEdge™ Controller
- OptixPanel™ Pro Graphic Terminal
- TechConnectIQ℠ Support
- PanelView™ Pro Graphic Terminal
- EtherNet/IP™ In-cabinet Solution

Featured Product

CompactLogix® 5390 Controller

When you need a control and information platform that balances performance, scalability and flexibility for a wide variety of industrial applications, look no further than the CompactLogix® 5390 Controller. With less complexity, stronger security and a design that reduces indirect costs like panel space, our next advancement in the Integrated Architecture® multidiscipline controller family is engineered to help you build faster, scale smarter and operate with confidence. Discover how the CompactLogix® 5390 Controller helps you build competitive, efficient machines without overcomplicating your world.

Available for customers: Fourth quarter, calendar year 2026.

TechConnectIQ℠ Support

TechConnectIQ℠ Support helps keep operations moving when technical issues arise. With one contract for remote hardware and software support, customers can access flexible support options, real-time software installed-base data, self-service resources and live expert assistance. Support is available 24/7/365 for installation, configuration, troubleshooting and diagnostics. Through MyRockwell, users can also search knowledge across domains, manage software updates and move seamlessly from self-service to expert support for faster, more confident resolution.

Available for customers: Fourth quarter, calendar year 2026

LogixEdge™ Controller

The LogixEdge™ Controller helps manufacturers support faster innovation, tighter IT/OT convergence and more flexible architectures. As the first IPC-based controller in the Logix portfolio built on software-defined automation principles, it combines embedded Logix control with containerized workloads in a compact industrial platform. Applications such as FactoryTalk® Optix™ can run alongside the Logix engine, helping simplify architectures, support software-centric strategies and enable easier scaling from development to production. IT-friendly device management capabilities also help streamline deployment and maintenance across connected operations.

Available for customers: Fourth quarter, calendar year 2026

OptixPanel™ Pro Graphic Terminal

Running modern, data-heavy applications can push traditional HMI hardware to its limits. OptixPanel™ Pro is built to handle that demand. This new addition to the OptixPanel portfolio supports FactoryTalk® Optix™ applications with the performance and flexibility needed for advanced visualization and edge use cases. With modular hardware, open architecture, and built-in security, it helps you scale your systems, improve insight and adapt as your operations evolve.

Available for customers: First quarter, calendar year 2027

Discover the Product

PanelView™ Pro Graphic Terminal

Upgrading legacy HMI systems often means downtime, redesign and rewriting applications. PanelView™ Pro helps you avoid that. This new addition to the PanelView™ portfolio is built for FactoryTalk® View ME and makes it easier to modernize without disruption. Keep your existing applications, maintain familiar cutouts and reduce engineering effort. With modular hardware and a managed operating system, you can improve performance, simplify maintenance and stay aligned with evolving cybersecurity requirements while upgrading on your timeline.

Available for customers: Fourth quarter, calendar year 2026

Discover the Product

EtherNet/IP™ In-cabinet Solution

The EtherNet/IP™ In-cabinet Solution transforms how manufacturers design, build and maintain control panels. By replacing traditional hard-wired connections with a unified Ethernet architecture, it delivers faster installation, richer diagnostics and a scalable foundation for modern industrial automation.

Available for customers first half of calendar year 2027.
